

Air Emission Monitoring

Eurofins Air Monitoring provides specialized services to measure and evaluate air emissions on ships. Whether your goal is compliance with regulations or continuous improvement, we are here to support you.

Our Air Emission Monitoring Include

Tailored Measurement Strategy

Propose a measurement strategy according to your goals.

Onboard Measurements

Deploying specialists and advanced equipment for onboard measurements.

Detailed Reporting

Provide a detailed report of our findings and comparison with applicable legislation.

Expert Advice

Advise you on next steps, depending on your projects.

Legal Framework

Starting in 2018, the European Union implemented Stage V standards, limiting particle matter (PM) and particle number (PN) emissions for non-road engines. Compliance with these and other international standards can be verified through testing certificates provided by Eurofins Air Monitoring.

Comprehensive Measurements

Operating from ARA Region Offices, Eurofins Air Monitoring conducts worldwide services using state-of-the-art equipment. We perform air measurements during various test cycles under different loads and speeds of the vessel.

General Physical Parameters

Humidity, temperature, pressure, speed.

Specific Emissions Parameters

CO, NOx, SOx, HC, PM, PN.

All our laboratories are ISO 17025 accredited
