

Accelerate Your Drug Development with Fast and Reliable In Vivo PK Studies

Our Capabilities

- Screening studies in rodents
- Bioavailability studies, including evaluation of BBB permeability
- Quantification of targeted organs
- Calculation and interpretation of PK parameters
- Data available within 2 weeks

Why Choose Us

- Fast, cost-effective and reliable decision-making tools for early drug development
- More than 35 years of expertise
- Fixed price: €2,500 per molecule for the whole assay
- 99% analytical success rate
- Dedicated scientific support
- Rapid screening to accelerate candidate selection

Tailored Packages for Early Decision-Making

Bioavailability Assessment €2,500

- Oral vs IV comparison
- Standard analytical method
- Animal purchase, sample collection and analysis
- Bioavailability determination
- Early PK profiling

ADME Screening Package €10,000

- Microsomal stability
- Plasma stability (human & rodent)
- Preliminary metabolite identification
- Preliminary in vitro PK & in vivo PK assessment

Hepatic Extraction Ratio Package €10,000

- Hepatic clearance prediction
- Extraction ratio determination
- Prediction of oral bioavailability
